What is AutoCAD? AutoCAD is a general purpose 2D drafting, design, and documentation software. It includes features to create technical drawings, landscaping plans, carpentry or plumbing plans, architectural plans, and technical illustrations (like flowcharts or mind maps). AutoCAD is one of the main tools used by designers, architects, and engineers to create and view 2D drawings and 3D models. AutoCAD creates a wide variety of drawings including architectural, engineering, drafting, and technical drawings. These drawings are used in a wide variety of fields including: construction, planning, product design, mechanical design, electrical design, and architectural and interior design. AutoCAD is used by designers and engineers to create the blueprints for new construction projects. More information about AutoCAD can be found on the Autodesk web site. Components of AutoCAD AutoCAD is designed to work with any standard computer with an internal or external graphics card. Before using AutoCAD, it is essential that you have a graphics card and that it is compatible with AutoCAD. The graphics card has both a video and processor to run the software. The processor and video are both necessary to create, view, or manipulate the drawing on the screen. AutoCAD includes two main components: the AutoCAD software itself and the computer itself. The computer is the hardware that holds the AutoCAD software. The hardware is the operating system that enables the computer to do the task at hand. It is the AutoCAD software that makes AutoCAD work. The software requires a license, which is paid for by the user of the software. Workstation Architecture The AutoCAD workstation consists of the following hardware components: Computer Operating System AutoCAD Software Interface The computer itself is a dedicated computer that can only be used for AutoCAD. The computer has a processor, memory, and a graphics card. The operating system (OS) is what makes the computer work. It is the software that runs on the computer. It manages the computer's hardware and application programs. It is what makes the computer "talk" to the graphics card. The operating system takes over the responsibility of graphics card software updates and hardware updates. AutoCAD software is what makes AutoCAD work.
