What Is AutoCAD? AutoCAD is a part of the AutoCAD family of applications, which include AutoCAD LT for smaller businesses, SketchUp for 2D drafting and 3D modelling, and Project, an all-in-one platform for managing projects and collaborating with team members. AutoCAD is also available as a standalone product. Unlike its sibling applications, it's not an integrated system. AutoCAD or AutoCAD LT is a software application that enables users to create 2D and 3D drawings. It was first released in December 1982 as a desktop application running on microcomputers with internal graphics controllers. AutoCAD has been generally well regarded and continues to receive updates and patches to improve its user experience. AutoCAD's popularity has been steadily growing over the last 40 years. While it has been used by designers and drafters from many different industries, its primary use has been in architectural design. With an emphasis on 2D design, and that AutoCAD first became popular with architectural designers, it has the largest community of users out of all of the AutoCAD software applications. With a modern architecture, AutoCAD uses a sophisticated graphical user interface (GUI), has tools that enhance productivity, and has a simple learning curve. AutoCAD 2019 is also available for mobile devices and the web. What is Autodesk? Autodesk is a company that provides software and services. They offer over 150 different software products, including AutoCAD. With a history dating back to the 1900s, Autodesk is a leading developer of 3D building information modelling (BIM) and computer-aided design (CAD) software applications. Autodesk has a reputation for developing a suite of applications including Rhino, 3ds Max, Inventor, Fusion 360, Vectorworks, Sculptris, Maya, Cinema4D, and many more. **Web Map Services** Web Map Services is a common web service approach to map services that is used in Web applications. It is based on Open Geospatial Consortium standards. **Web Map Tools** Web Map Tools (WebMapTools) is a set of technology tools and services that enable the visualization of geographic data, including geographic information systems (GIS) data and enterprise data from spatial, transactional, and analytic perspectives. WebMapTools is an extension of the GIS cloud services, WebMapBox, which can work with any GIS layer.

WebMapTools includes maps, web analytics, site search and mobile device detection, publishing and reporting, and secure collaboration. WebMapTools is a collection of components that enable developers and IT organizations to create and deploy web maps quickly, seamlessly, and securely. Microsoft promotes SQL Server spatial functionality in the Office and SharePoint server product lines by providing spatial functionality through the Microsoft SQL Server spatial extensions, Spatial Data Services (SDS). SDS provides support for a variety of spatial data types, including geography, geometry, and topology. SDS also allows developers to integrate support for spatial data types into existing SQL Server database applications. Microsoft Office 2010 includes a preview of SDS for Analysis Services in addition to existing support for OLAP. Microsoft extended support for SQL Server 2008 R2 through the April 2015 end of extended support. Microsoft also promotes the software development kit (SDK) for Web Map Services (WebMSDK). WebMSDK is based on the Open Geospatial Consortium (OGC) Web Mapping Service (WMS) standard and has been demonstrated for use with Bing Maps. Microsoft released the first SDK for WebMSDK, named the ".NET" Web Map Services Framework, on September 19, 2009.

Developer communities have grown around spatial technology, and this has led to high expectations that the field will advance more rapidly than other more traditional data-intensive technologies. The GIS Cloud (GigaSpatial) initiative of the National Geospatial-Intelligence Agency is promoting the application of spatial technologies to help address national security issues. In 2012, The US government's Defense Advanced Research Projects Agency, through its DARPA Land Portability Mission Area announced the LandX Corporation would receive a \$14 million contract for a program known as MULE. MULE is an abbreviation for Mobile User eXperience and relates to the efficiency of moving information and data, primarily using a1d647c40b
