“With ‘HyperMotion Technology’ we have designed our fastest ever game engine to enable our most compelling features, such as the new ‘deceptive dribble,’ in-depth player control and unparalleled passing and shooting accuracy,” said Stephan Schreck, Studio Director at EA SPORTS. FIFA’s new “deceptive dribble” is one of five key new features that the game is introducing alongside the creation of a brand-new cover athlete, “Antoine Griezmann.” Players will be able to show off their dribbling skills in FIFA 22 with the introduction of the new “deceptive dribble.” Although the attacking player is the most agile and fastest dribbler, there will be a subtle difference in the defensive dribbling. When players apply pressure in defense, the method is dependent on the step taken. Depending on the step

taken, the full weight of the defender's body comes to bear. The weight of the defender's body forces the player to slow down. As the body of the defender bears down, they cannot step out to the side and dodge the dribbling player. Then as the defender's body weight comes down, the player can accelerate once again and regain their speed. The process of the attacking player dribbling forward using their deceptive dribble involves an exchange between the defending player and the ball. The defender should make up their mind whether to step out in anticipation of a deceptive dribble attempt or stay in place, focusing on the play. The defender can change their position at any point. If the defender chooses to move after a deceptive dribble attempt is completed, the defender will be off balance. "The new 'deceptive dribble' builds on one of the most popular features of FUT - the dribbling style," said Jeremy Reimer, Head of FUT. "We know that our players love competing against each other on FIFA Ultimate Team and having the option to improve this feature creates a new level of excitement. We also know that they enjoy playing on the field with the ball, so we have created a feeling of tension in our games by giving them more tactical control in the defensive dribbling zone." In addition to the new "deceptive dribble," FIFA 22 introduces a new AI system to FIFA Ultimate Team and Master League, while new spectator tools

For those that don't know, EA FIFA is arguably the best football game on the market right now. Its steep learning curve, wonky controls, lack of proper movement options, and confusing user interface have always kept it from being a widely loved, well-adjusted game. But with FIFA 21, EA have made a number of fundamental gameplay advances that should improve the game in its own right and make

it an even better football simulator. On top of the tweaks to gameplay, FIFA 21 will feature a complete revamp to the FIFA Ultimate Team, a more advanced FIFA Scouting System, and the most significant overhaul to the online experience since FIFA 16, with major server improvements and more than 20 million gamers playing the FIFA Ultimate Team mode at the same time at peak times. These features and features alone make FIFA 21 worth the \$59.99 price of admission, but we've also got a brand new game mode to throw in as well. Let's get started!

Quick Navigation: Play Points: Play as whichever team you like EA Points: Earn points across the full game modes Pass the Puck: Earn points on the pitch to unlock valuable upgrades to team equipment FIFA Ultimate Team: Customise your teams with Packs and rare new cards Scout Mode: Complete in-depth scouting reports on potential new signings Player Ratings: Stick to your transfer strategy in this new version of Head-to-Head mode. Compete with Pro Clubs: Take on the best teams in the world 11 New Game Modes In fact, the biggest new feature is FIFA 21's new Game Modes. The game offers 11 different modes across 11 different game modes. It's a lot of modes, but that's not a criticism, because there are more modes in FIFA than there are on most other games. Almost everything in the FIFA series is crafted around the ball, and it all revolves around increasing the realism of the football experience. But FIFA 21's new mode system is based on the realistic tension of trying to make it to the top of your club's hierarchy. Although each mode will be available to play once the game launches, and we've got coverage on all of them in the preview, we're going to take a minute to talk about one in particular. FIFA Ultimate Team (FUT) is probably the biggest part of FIFA 21, and it's the mode that's more like the real-life version of club management. bc9d6d6daa

What's new:

- **Introduces “HyperMotion Technology,” which uses motion capture data from real-life professional footballers to animate authentic player animations in FIFA 22. Players can be in motion longer, more frequently, and with more believable physics as they realize their full potential. Each of the movement types (duels, dribbles, goals, touches in-the-box, tackles and headers) has its own weight, pace and follow-through, enabling nuanced actions during gameplay.**
- **New free-kick movement. New mechanics and animations enable free-kicks to move and strike the ball in more realistic ways. Your standard free-kick may look the same in each version, but in FIFA 22 you'll be able to raise your arm to make your kick longer, pull-back your leg to make it straighter or execute a more powerful shot to add more length.**
- **Real-time strategy (RTS) support for new, more immersive FIFA Ultimate Team. Use FIFA’s new RTS rules to customise your team, make substitutions, manage your player development and go on the attack or defense against rival players in the same way as in the core game. All players are now tracked in real-time. The ability to give a player orders mid-match or leaving the pitch depends on their mental state. When a player goes offline, the team will react accordingly.**

-
- The new “Blue” Engine now uses MSAA anti-aliasing and more realistic lighting, to create the best looking visuals on consoles. This will add another dimension to the player models and opening scenes.
 - Noted music and sounds in FIFA 22.
