I want to create some SVG images which will be used as logos in a mobile app. However, the SVG files I'm trying to import into the app's graphics editor keep loading for a long time and high CPU usage is displayed while they're being used. The SVG images are only a couple of KB, so I think that's why they're taking so long to load. I tried to look up solutions for this problem, but none of them appear to apply here. How do I fix this? This is the beginning of the icon that gets used. A: This is not an SVG issue - it is the browser converting the SVG to its native format. Most browsers will pre-convert SVG to their internal format before displaying it to you (as long as they have the required capabilities). However, different browsers have different methods of doing this (and the results they end up with can be very different). Google Chrome on Android handles SVGs differently to other browsers. See: How do Google Chrome, Firefox and Safari handle SVG images on Android? How do different browsers handle the different SVG file types? Android Chrome and FireFox for Android For the majority of situations the browser will have the correct settings to display the SVG in it's native format (so for a simple, basic SVG that isn't image-heavy, it should be the same as for other browsers). However, if the SVG is image-heavy (e.g. contains lots of tags) then you may get better performance in Chrome than in other browsers. To ensure the most flexibility, you could choose to "Open link in SVG view" in Chrome (which will load the SVG in Chrome's default browser). Alternatively, there's a toolbar icon in Chrome for this (but if you don't want to go to the trouble of opening the link in a new browser then you'll need to work around this issue). To use an SVG in a mobile app on an iPhone and iPad, you can embed the SVG using a native mobile app like Sketch - this will work on Android as well. If you want to create an SVG in a mobile app on Android, see: How to create svg files in android? I hope this helps - let me know if you have any other questions.
